

# THE ADVANTAGE OF FIDESZ INCREASES

According to last week's nationally representative poll conducted by Nézőpont Institute, the advantage of the ruling party (40 percent) over the left (34 percent) has increased to six percentage points. The strengthening could be explained by the success of the vaccination program. 58 percent of Hungarians are satisfied with the work of the Prime Minister with respect to the defence against the pandemic.

QUESTION: Are you satisfied or unsatisfied with the work of the Prime Minister?

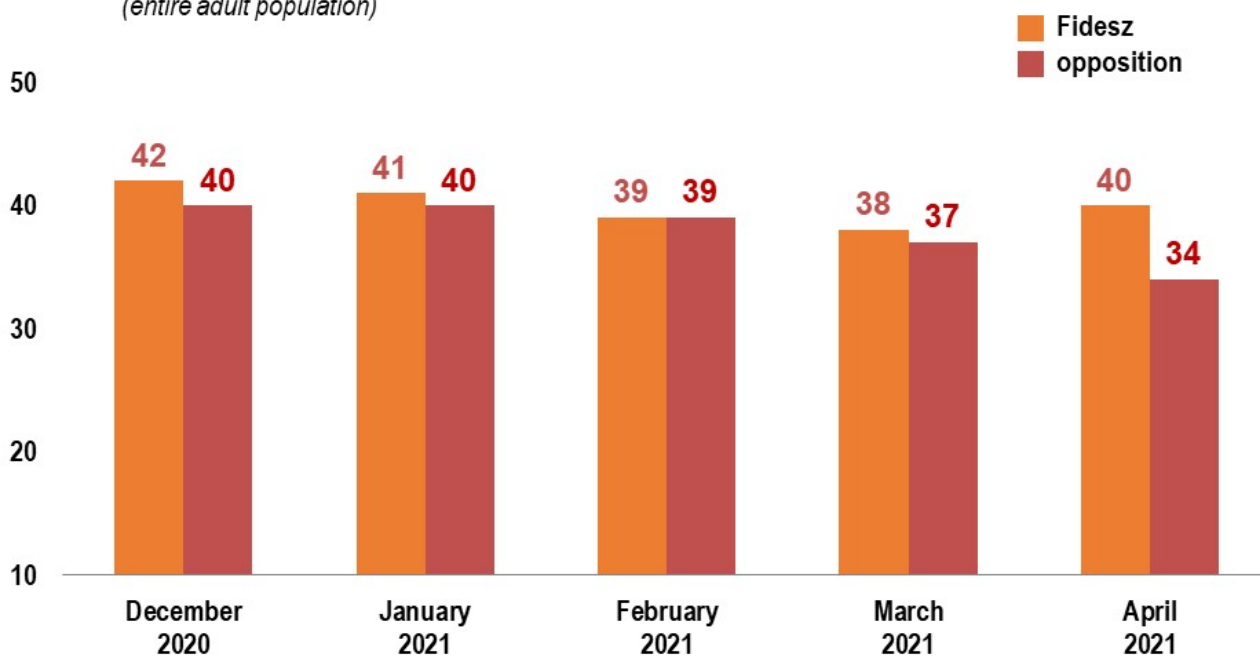

*The public opinion poll was conducted by Nézőpont Institute between 27-28 April 2021 based on telephone interviews with 1,000 respondents. The sample is representative of the 18+ population by gender, age, region, settlement type and level of education. A sample of 1,000 at 95 percent accuracy has a margin of error of 3.1 percent.*

Six out of ten adult Hungarians (58 percent) are satisfied with the work of the prime minister, and only one in three (35 percent) is critical of him. After such a long year of fight against the coronavirus, only a few European countries have realized similarly high satisfaction rate. The increasing willingness to vaccination in the spring of 2021, the success of vaccine procurement, and the outstanding vaccination rate may explain the high satisfaction index. The satisfaction with the work of Viktor Orbán has even increased (by 4 percentage points) compared to the data before the pandemic, although the peak value of last spring (72 percent) can hardly be repeated.

# THE ADVANTAGE OF FIDESZ INCREASES

QUESTION: If an election were held this Sunday, which party or list of party alliance would you vote for?  
(entire adult population)

*The public opinion poll was conducted by Nézőpont Institute between 27-28 April 2021 based on telephone interviews with 1,000 respondents. The sample is representative of the 18+ population by gender, age, region, settlement type and level of education. A sample of 1,000 at 95 percent accuracy has a margin of error of 3.1 percent.*
