THE CENTRAL FIELD OF POWER HAS BEEN RESTORED

PUBLIC OPINION POLL BY NÉZŐPONT INTÉZET

THE CENTRAL FIELD OF POWER HAS BEEN RESTORED

From the standpoint of party contests, Fidesz-KDNP has become the frontrunner during the year. Based on Nézőpont Intézet’s monthly public opinion polls, the governing parties have been able to regain strength by an additional 8 percentage points after having a low point at the beginning of the year (26 percent).

Based on polls, the central field of power has been restored by the end of 2015, which was destabilized prior to the immigration crisis and after Jobbik’s Tapolca victory. Currently, none of the opposition forces present a substantial threat to the governing parties.

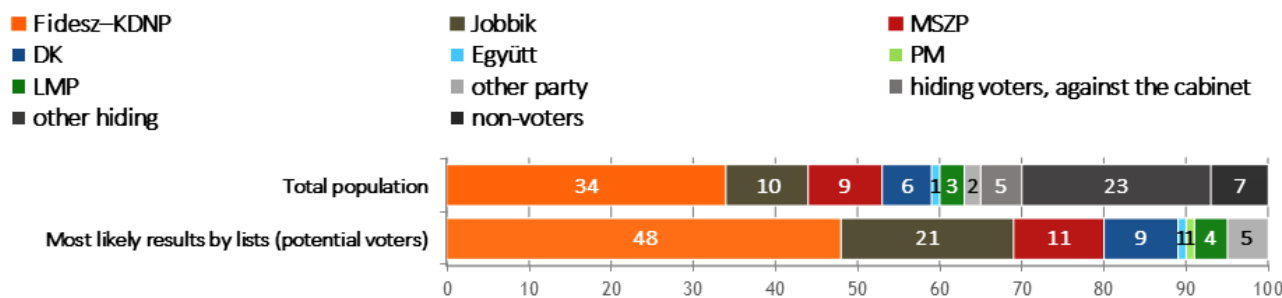

Jobbik has been able to show only some quickly fading partial successes this year. After the victory at Tapolca their support was at nearly 20 percent, but by the end of the year, the Jobbik camp has shrunk to 10 percent. After the October and November gains, these recent setbacks spelled the end of the party’s ‘people’ party’ ambitions.

The Left has not been able to make any gains at all. Within the total population MSZP has been rated below the 10 percent support level since the spring that is considered to be a threshold and DK has been stagnating all year. While LMP has been brushing the parliamentary threshold from below, Együtt and PM could hardly be registered at various times.

According to Nézőpont Intézet’s December poll, within the total population, Fidesz-KDNP’s support is consistently 34 percent. Jobbik has 10, MSZP 9, DK 6 and LMP 3 percent, while Együtt has 1 percent voter support.

Based on the most likely results along lists (potential voters) Fidesz-KDNP is at 48 percent, Jobbik has 21, MSZP 11, DK 9, while Együtt and PM have 1 % each, respectively. LMP currently has 4%.

WHICH PARTY WOULD YOU VOTE FOR IF THE ELECTIONS WERE HELD THIS SUNDAY?

Public opinion poll was prepared at the request of Heti Válasz.

Methodology

Nézőpont Intézet’s latest public opinion telephone poll was conducted during December 3-7, 2015 by asking 1000 people. This representative sample pertains to the population age 18 and over, sorted by gender, age, region, settlement type and schooling. In case of samples comprising the responses of 1000 people the maximum margin of error is 3,2 percent.
